# 1. 题目

### 263A. Beautiful Matrix

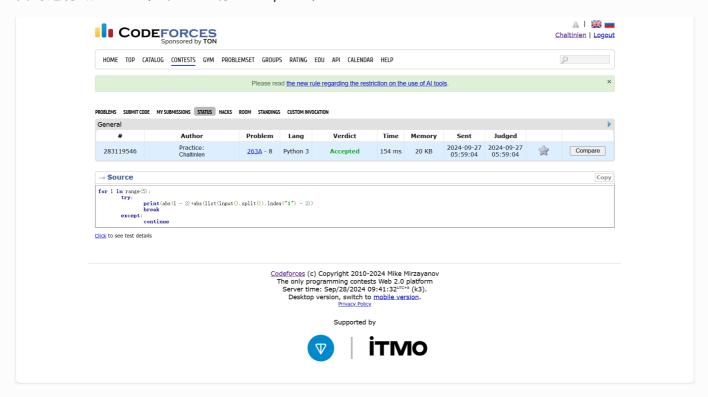

https://codeforces.com/problemset/problem/263/A

思路: 找出矩阵中1的坐标, 计算和中心处的曼哈顿距离即可

#### 代码

```
for i in range(5):
    try:
        print(abs(i - 2)+abs(list(input().split()).index("1") - 2))
        break
    except:
        continue
```

代码运行截图 == (至少包含有"Accepted") ==

### 1328A. Divisibility Problem

https://codeforces.com/problemset/problem/1328/A

思路:用好取余,最后再考虑一下能整除的可能性

#### 代码

```
n = int(input())
for i in range(n):
   a, b = map(int, input().split())
   print((b-a%b)%b)
```

代码运行截图 == (至少包含有"Accepted") ==

### 427A. Police Recruits

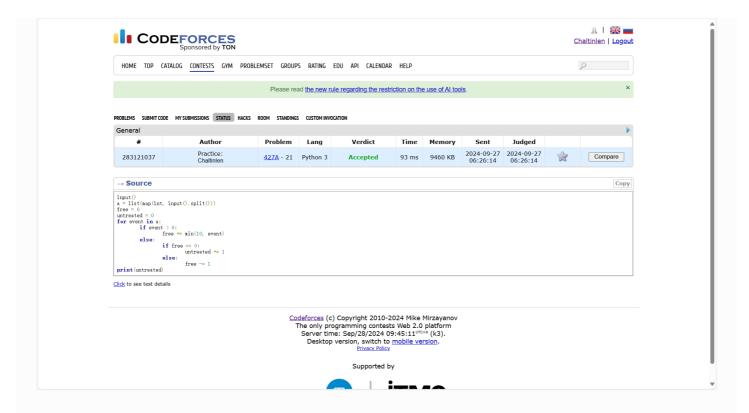

https://codeforces.com/problemset/problem/427/A

思路:不动脑子,怎么说就怎么做,当然数据个数可以选择直接不管

### 代码

```
input()
a = list(map(int, input().split()))
free = 0
untreated = 0
for event in a:
    if event > 0:
        free += min(10, event)
    else:
        if free == 0:
            untreated += 1
    else:
        free -= 1
print(untreated)
```

代码运行截图 == (AC代码截图,至少包含有"Accepted") ==

## 02808: 校门外的树

http://cs101.openjudge.cn/practice/02808/

思路: 放弃数学方法,选择计算机模拟,10000个数,可以接受

### 代码

```
M, L = map(int, input().split())
trees = [True for i in range(M + 1)]
for i in range(L):
    a, b = map(int, input().split())
    for ele in range(a, b + 1):
        trees[ele] = False
print(trees.count(True))
```

代码运行截图 == (AC代码截图,至少包含有"Accepted") ==

# sy60: 水仙花数II

https://sunnywhy.com/sfbj/3/1/60

思路:直接验证,把数字转成字符串再转化回数字。当然,也可以直接取余,但还是选择了更直 观的字符串方法

### 代码

```
a, b = map(int, input().split())
have_narcissus = False
for i in range(a, b + 1):
    i1 = int(str(i)[0])
    i2 = int(str(i)[1])
    i3 = int(str(i)[2])
    if i == i1**3 + i2**3 + i3**3:
        if not have_narcissus:
            print(i, end = "")
        else:
            print(f" {i}", end = "")
        have_narcissus = True
if not have_narcissus:
    print("NO")
```

代码运行截图 == (AC代码截图,至少包含有"Accepted") ==

### 01922: Ride to School

http://cs101.openjudge.cn/practice/01922/

思路: 算出所有时间的最小值即可,但要排除掉出发时间为负的

#### 代码

```
from math import ceil
while True:
    n = int(input())
    if n == 0:
        exit()
    time = []
    for i in range(n):
        v, t = map(int, input().split())
        if t < 0:
            continue
        t += 4.5/v * 3600
        time.append(t)
    print(ceil(min(time)))</pre>
```

代码运行截图 == (AC代码截图,至少包含有"Accepted") ==

## 2. 学习总结和收获

==如果作业题目简单,有否额外练习题目,比如:OJ"计概2024fall每日选做"、CF、LeetCode、洛谷等网站题目。==
